

Team Members:

- Varatep Buranintu
- Daniel Jameson
- Yun Kim
- Cale Watson

Work Division Summary:

Daniel Jameson and Cale Watson created the server provisioning bash scripts, which includes the installation.sh file to set up the LAMP stack, a user for the MySQL database, and creates the actual database and tables required for the web application.

Yun Kim and Varatep Buranintu focused on the actual web application with some aid from Daniel and Cale to bring together an index page which redirects to the register page, a login page, and a recover credentials page.

Everyone on the team tested the scripts and web application on their local machines with an Ubuntu image using Oracle VM VirtualBox.
